

SLF Light Soft Box Assembly

1. Position hood in same direction as the panel.
Place the hood over the SLF light from the front.

2. Attach one rod to the panel and hold at the corner of the hood.

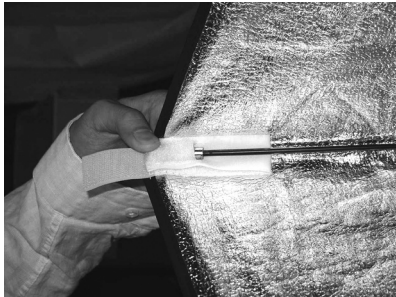

3. You will find 3 corners with fixed holes for the rods and one corner with Velcro. Attach the rods in the 3 fixed holes first.

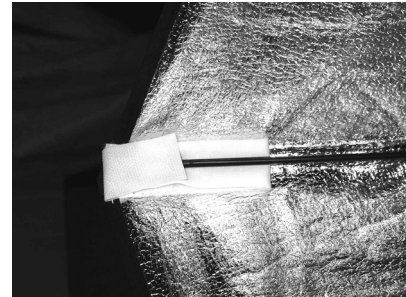

4. Attach the 4th rod on the panel and Velcro the corner. You may need to loosen the Velcro for easy assembly.

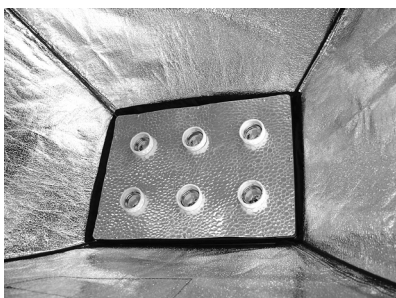

5. Pull up the hood and the Velcro will fold over for stabilizing the 4th rod.

6. Fold the Velcro over.

7. The SLF light soft box is now assembled. Please note that the base bracket should remain outside.

8. Take care to make sure sides are smooth and not bunched.
